

## Planting, Care Guide & Warranty

### Thank You for choosing Us

In this Brochure we give some basic care and guidelines for planting, there can be more info needed on the plant you've purchased. But this is a good base to start and it may be all that is needed for the care of the particular plant you've purchased. Pruning will be needed in time, to properly shape and keep the plant healthy. But for now please read through this to ensure the flourishing growth of your new plant.

### Plant Warranty:

Our one Year warranty is limited, it covers a tree or shrub that was purchased within the last year from Korpi Nursery. The plant must have had proper care, as explained in the planting guide, it also must be planted in the right soil, sun light, and PH. If the plant dies due to pests or natural disasters it is not covered.

We are glad to stand behind this warranty as long as above conditions are met and you have receipt, and proof of loss, which if defined as at least 3 photos of all areas of plant and/or plant in hand and/or a manager come to the site for large plants and losses. The warranty will be honored in kind, by giving the same plant to you. This does not cover installation of warranted plant materials.

This exception applies, if you order a plant through us that is not Zoned for this environment and it dies (you will be informed of any plants that are not zoned for this environment).

We appreciate your Business, and we are glad to serve you.

Owner/ CEO

## PLANTING GUIDELINES

### Trees, Shrubs / POTS or BB's

Dig a hole 1 ½ times the depth of ball & 2 times the width of plant. B&B –cut burlap & twine away from top of root ball, wire stays in place. Place plant in the hole matching original soil line on tree or shrub. Pack backfill around base of root ball to stabilize; allow rest of backfill to settle naturally. Use top soil mixture of 2/3 top soil 1/3 compost (Eco Compost Recommended) .Do not pile dirt over original line(1-3" on top). Water thoroughly.

**Optional:** A ring of soil rich compost or mulch (keep mulch away from truck base) can be formed around the edge of the root ball to create a shallow basin that will direct irrigation into root ball.

**Watering-thoroughly** 3 times a week during summer and once a week for the rest of the season.

**Tree Staking**-place 2-3 posts depending on size of tree, 18-24" deep at root line in undisturbed soil. Use soft padded ties or nylon trunk harness material to wrap trunk. Allow slight amount of tension as moderate trunk movement increases the tree's strength.

**Please take the time to plant each plant in the right soil, sunlight, PH, as shown on the tag and given by the Plant professional, this will ensure that the plant will flourish, for many years to come**

**Fertilizing** every Season for best Results.

**Deer protection**, please be ware deer can be problematic for plants and protection may be needed in certain areas, please ask a plant professional for details.

### PERENNIALS

Dig hole 2 times larger than plant. Remove plant from pot gently straighten out any circular roots to allow proper root growth. Refill planting hole with rich top soil so the plant will be sitting at the same level as when growing in the pot. Place plant in hole and firmly pack the soil leaving a small depression around base of plant for watering. Water until plant is thoroughly soaked.

New plants need to be watered thoroughly about once week unless very dry conditions exist for the first year.

**Fertilizing** Up to twice a season

**Deer & Rabbit protection** please be aware deer & rabbits can be problematic for plants and protection may be needed in certain areas, please ask a plant professional for details.

Please feel free to contact us for any questions or special requests. We are here to make your gardening experience a pleasure.
